

CLEANROOM PASS BOX LIFT W/AIR SHOWER

Product Description

The best way to minimize contamination is to keep unnecessary people out of the controlled environment. A pass-box significantly minimized such human traffic and contamination by providing a better and safer way to transfer materials, equipment, and documents into and out from the cleanroom.

The Pass Box Lift with Air Shower offers an effective and efficient way to transfer materials into and out from clean rooms which are installed at raised height. The unit's air-shower is activated once the material is loaded onto the pass-box and the user activates the system by pushing the start button.

Features

- Powder coated EG Steel or SUS 304 Main Body
 - Integrated Lift within Pass Box
 - Air-shower helps to remove particles on materials going into the cleanroom.
- Units without integrated air-shower systems are also available.
- Electrical Interlock
 - PLC Control
